PROFESSIONAL DEVELOPMENT WORKSHOP UNDERWATER ROBOTICS FOR TEACHERS

Workshop participants build and take home a remotely operated vehicle (ROV) kit and experience to help prepare a student team for the Gray's Reef Southeast MATE ROV Competition.

Our marine technology educator workshop features review of simple circuits, switches and soldering of electrical component parts and circuit boards, frame building of submersible vehicles, and test piloting.

Kits and resources are provided to educate youth and communities on how to build a sustainable future through environmental education and ocean conservation initiatives, courtesy of a grant from the Honda USA Foundation!

November 19-20, 2022
Georgia Institute of Technology,
Atlanta, Georgia
Cost: \$100 registration
